

# INFORMATION ABOUT THE GIT

- Git stands for global information tracking system
- git is version control system because it keeps track of the all the changes made to files in a project. This way, you can go back to previous versions if needed.
- Repositories : A Git repository is where your project's files and their history are stored. There are two main types
  - Local repository : This is stored on your computer.
  - Remote repository : This is stored on a server, like github, so it can be accessed by multiple people.

Q) What is git?

Git is a tool used by developers to manage and track changes in their code.it helps teams collaborate on projects without overwriting each other's work.

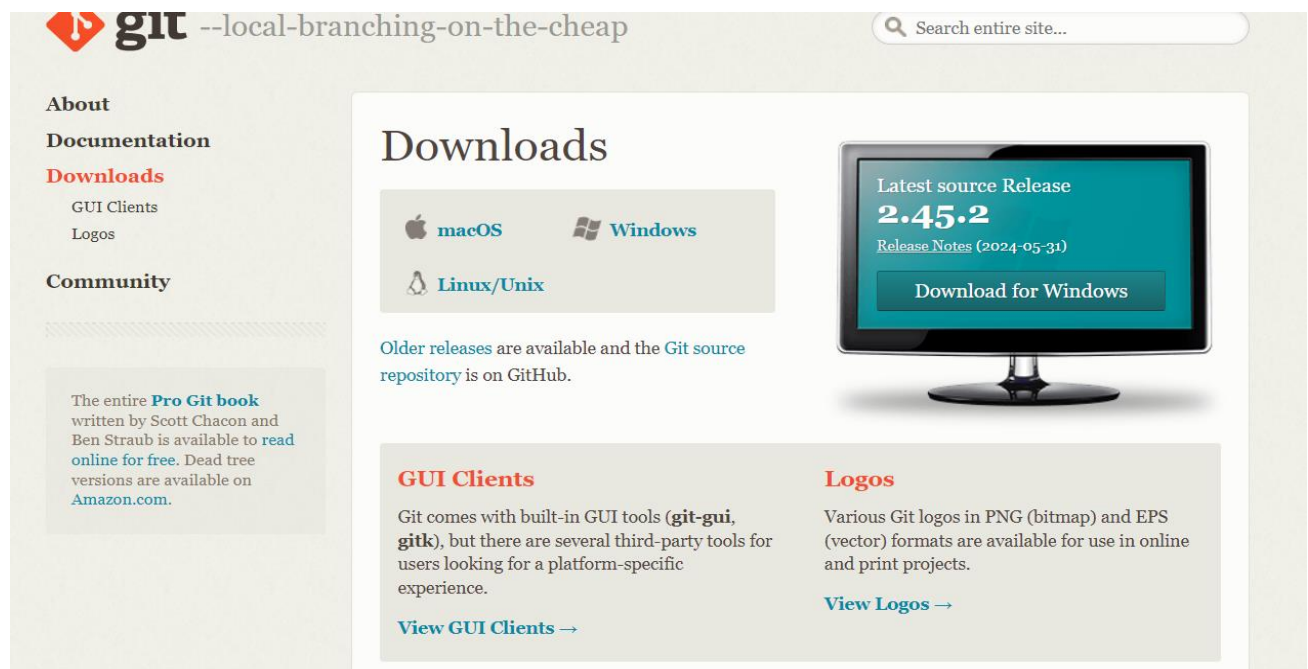

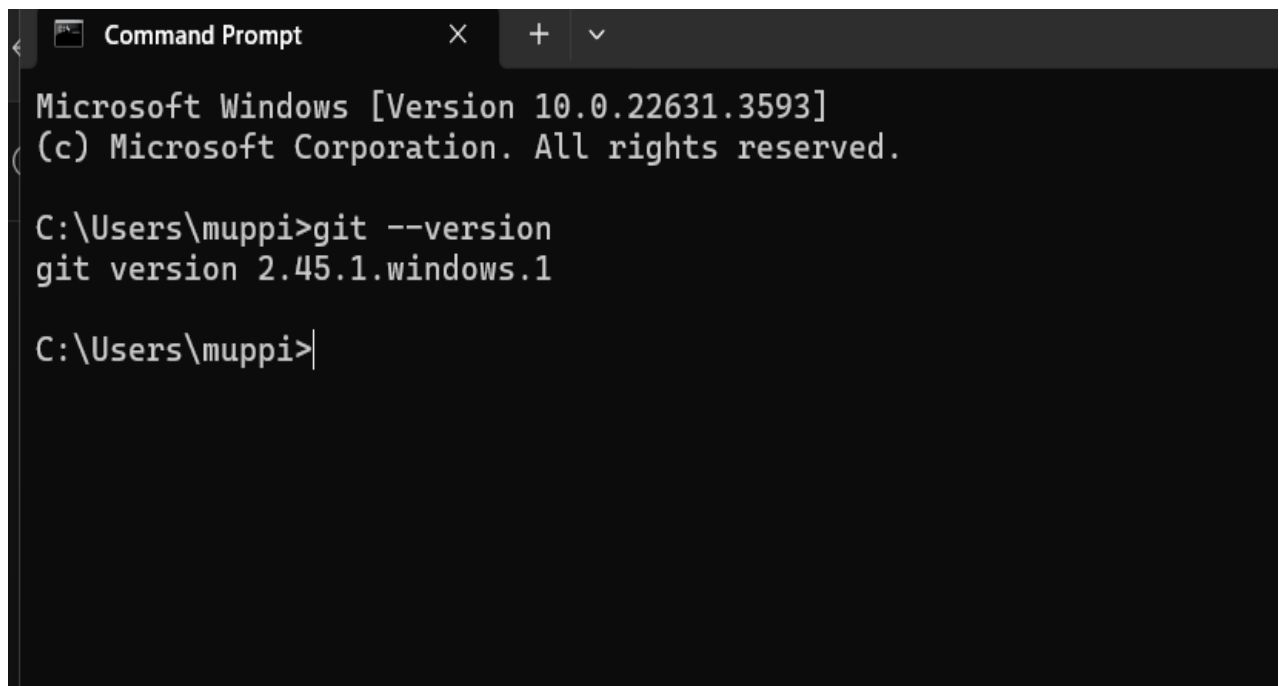

Fig : download the git

```
Microsoft Windows [Version 10.0.22631.3593]
(c) Microsoft Corporation. All rights reserved.

C:\Users\muppi>git --version
git version 2.45.1.windows.1

C:\Users\muppi>
```

Fig : installation of git

## GIT Commands :

Git init : initialize a repository

Git clone url : create a copy of an existing repository

Git add filename : To add a specific file to staging area

Git status : To display the state of the working directory

Git branch : It is used to manage the branches in a git repository

Git commit -m "msg" : Used to save changes to the local repository

Git push : It is used to upload local repository content to a remote repository
